eduroam WLAN for Google ChromeOS

You need a **working Internet connection** in order to install eduroam on your computer. You can use your **mobile phone`s data plan** via personal hotspot, your own **WiFi** at home or the **WiFis CampusUniPassau-WLAN** or **BayernWLAN** when on Campus.

Step 1

You've got internet now. Perfect!
Now **get your personal eduroam certificate** on https://uni-passau.de/cert (enter-**exactly** this!). Enter your **ZIM ID** (e. g. **sample 01** and the password you've set on zim uni passau de/ kennung. Then click on „**Download certificate**".

> **Remember: one account, one password!**
> **Do not use** your use your old application ID (firstName.lastName)!

Step 2

Connect to **CampusUni-Passau-WLAN**. Login with your ZIM-ID.
Download the file: https://romulus2.rz.uni-passau.de/radius_rootcert.pem:SSL. Start Chrome and enter the following: „chrome://settings/certificates". Click on the „**My Certificates**" tab. Then click on „**Import and bind**". Select the certificate you just downloaded. When asked for the **password for the certificate**, enter only **your ZIM-ID** - **not** your password!

Step 3

After the import, the note „**Hardware-supported**" should be displayed.
Go to the „**Certification Authorities**" tab, select „**Import**" . Click on the downloaded root certificate and aktivate all the ticks here. After successful installation, select **eduroam** from the WIFI list and apply the following settings:

SSID:	eduroam	**User certificate:**	RADIUS User CA sample01@uni-passau.de
EAP-Method:	EAP-TLS	**Identity:**	sample01@uni-passau.de
CA-Server certificate:	RADIUS CA Uni Passau		

Then click on **connect**.

You`re done!

> **One certificate for all your devices is valid for 3 years.** As soon as you create (!) a new cerifivate your old cerificate **will be invalid!** You`ll then need to **reinstall** the new certificate on your devices**!**
